# Town of Midland launches two new projects to rehabilitate old infrastructure and add new servicing

April 28, 2022 – The Town of Midland is launching two new road construction projects on May 2, 2022. The Seventh Street Reconstruction project and Balm Beach Road Servicing project continue the Town’s commitment to replacing or upgrading the underground infrastructure throughout the municipality.

“The Town of Midland has shown over the past few years that we are dedicated to taking on these extensive projects to proactively replace aging underground infrastructure, and install new service infrastructure, so that residents continue to receive quality service and enhance future development and growth,” said Mayor Stewart Strathearn. “Over the past three years the Town has completed similar projects on Hugel Avenue, Hannah Street, and of course King Street, which was completed on time and under budget, during the pandemic. We look forward to more success with Seventh Street and Balm Beach Road.”

### **Seventh Street Reconstruction Project**

Due to the aging and deteriorating underground infrastructure along Seventh Street, the Town will be doing a full reconstruction on this street, between Yonge Street and Hugel Avenue. Working with Tatham Engineering and Arnott Construction, this project will include:

- Replacement of sanitary sewer, including individual sewer lateral pipes to the property line;
- Replacement of watermain including individual water lateral pipes to the property line;
- Reconstruction of approximately 380m of roadway, including the installation of concrete curbs and concrete sidewalks on the west side; and
- The work will also include restoration of areas disrupted by the construction, including driveway entrances and other sections within the boulevard.

### **Balm Beach Road Servicing Project**

To promote development in Midland, the Town is adding new infrastructure along Balm Beach Road, from Sundowner Road East to Sundowner Road West. Working with WSP Engineering and B&J Contracting, this project will include:

- Placing approximately 900m of sanitary sewer main and service lateral pipes to the property line;
- Placing approximately 900m of watermain and water service lateral pipes to property line;
- Adding approximately 820m of sidewalk along the north side of Balm Beach Road to Highway 93; and
- The work will also include restoration of areas disrupted by the construction, including driveway entrances and other sections within the boulevard.

More information on the [Seventh Street Reconstruction project](#) and [Balm Beach Road Servicing project](#) can be found on Engaging Midland, where updates throughout each project will be provided.
