### 1.0 Introduction

A traffic count was conducted from June $30^{\text {th }}, 2021$, to July $14^{\text {th }}, 2021$, on King St for both northbound and southbound directions. Vehicle speeds and traffic volume were collected by a traffic trailer (model ATS-3).

### 1.1 Location

The traffic trailer was placed on King St between sidewalks and curbs to record the speed and volume of vehicles. Table 1 below shows the location of the traffic trailer and data collection period.

Table 1 Locations of Traffic Trailer

| Direction | Location | Period |
| :---: | :---: | :---: |
| Northbound | 815 King St, Midland, ON | 10:00 AM on July $7^{\text {th }}, 2021-9: 00$ AM on July 14 ${ }^{\text {th }}$, , 2021 |
| Southbound | 788 King St, Midland, ON | 11:00am on June $30^{\text {th }}, 2021-10: 00 \mathrm{am}$ on July $7^{\text {th }}, 2021$ |

### 1.2 Traffic Trailer

The traffic trailer used was model ATS-3 as shown in the Figure 1. The traffic trailer is set to display the speed of the approaching vehicle and display short messages depending on the speed. The traffic trailer uses radar to detect vehicles and group collected data into 1-hour intervals.

Figure 1 Traffic Trailer

### 2.0 Speed Summary

The posted speed limit on King St is $50 \mathrm{~km} / \mathrm{h}$; however, generally it is accepted that vehicles that are travelling up to $10 \mathrm{~km} / \mathrm{h}$ above the posted speed limit are not considered to be speeding. Table 2 shows an overall speed summary of the data collected for southbound and northbound directions.

Table 2 Speed Summary

| Direction | Average Speed <br> $(\mathrm{km} / \mathrm{h})$ | $85^{\text {th }}$ Percentile <br> Speed $(\mathrm{km} / \mathrm{h})$ | Minimum Speed <br> $(\mathrm{km} / \mathrm{h})$ | Maximum <br> Speed $(\mathrm{km} / \mathrm{h})$ |
| :---: | :---: | :---: | :---: | :---: |
| Southbound | 47.15 | 55.69 | 10 | 90 |
| Northbound | 51.39 | 58.51 | 10 | 91 |

### 2.1 Southbound Speed Analysis

Figure 2 to 4 below show the speed summary for the southbound traffic.

- $11 \mathrm{~km} / \mathrm{h}-50 \mathrm{~km} / \mathrm{h}$
- $51 \mathrm{~km} / \mathrm{h}-55 \mathrm{~km} / \mathrm{h}$
- $56 \mathrm{~km} / \mathrm{h}-60 \mathrm{~km} / \mathrm{h}$
$61 \mathrm{~km} / \mathrm{h}-65 \mathrm{~km} / \mathrm{h}$
- $66 \mathrm{~km} / \mathrm{h}-80 \mathrm{~km} / \mathrm{h}$
- 81km/h-110km/h

Figure 2 Speed by Average Volume Southbound
Figure 2 above shows that $30.2 \%$ of vehicles were travelling below the posted speed limit, $59.5 \%$ of vehicles were travelling between $51-60 \mathrm{~km} / \mathrm{h}$, and $10.4 \%$ of vehicles were travelling above $60 \mathrm{~km} / \mathrm{h}$. Considering the accepted speed limit is $10 \mathrm{~km} / \mathrm{h}$ over the posted speed limit, a total of $89.7 \%$ of vehicles were travelling within the accepted speed limit in the southbound direction.

Figures 3 and 4 below are the speed by hour graphs for weekdays (July $1^{\text {st }}$ to $2^{\text {nd }}$ and July $5^{\text {th }}$ to $6^{\text {th }}$ ) and the weekend (July $3^{\text {rd }}$ to $4^{\text {th }}$ ) in the southbound direction.

Figure 3 Speed by Hour Analysis for Southbound (Weekday)

Figure 4 Speed by Hour Analysis for Southbound (Weekend)
Figure 3 (weekday) and Figure 4 (weekend) above are the speed by hour graphs used to determine the time where most speeding occurs. On weekdays, speeding rates for a curve that begins to increase at 5:00am before reaching a peak between 3:00pm and 7:00 pm. On weekends, the rate of speeding formed a curve which began increasing at 7:00am and reached its peak from 4:00pm to 5:59pm before beginning to decrease again.

### 2.2 Northbound Speed Analysis

Figures 5 to 7 are the speed summary for the northbound traffic.

Figure 5 Speed by Average Volume Northbound
From this summary we can see that $41.3 \%$ of the vehicles were travelling below the posted speed limit, $48.2 \%$ of vehicles were travelling between $51-60 \mathrm{~km} / \mathrm{h}$, and $10.6 \%$ of vehicles were travelling above $60 \mathrm{~km} / \mathrm{h}$. When we consider the accepted speed limit is $10 \mathrm{~km} / \mathrm{h}$ over the posted speed limit, we find that a total of $89.5 \%$ of vehicles were driving within the accepted speed limit.

Figures 6 and 7 below are the speed by hour graphs for weekdays (July $8^{\text {th }}$ to $9^{\text {th }}$ and July $12^{\text {th }}$ to $13^{\text {th }}$ ) and the weekend (July $10^{\text {th }}$ to $11^{\text {th }}$ ) in the northbound direction.

Figure 6 Speed by Hour Analysis for Northbound (weekday)

Figure 7 Speed by Hour Analysis for Northbound (weekend)
Figure 6 (weekday) and Figure 7 (weekend) above are the speed by hour graphs used to determine the time where most speeding occurs. On weekdays, speeding rates for a curve that begins to increase at 5:00am before reaching a peak between 4:00pm and 6:59pm. On weekends, the rate of speeding formed a curve which began increasing at 6:00am and reached its peak from 4:00pm to 6:59pm before beginning to decrease again.

Furthermore, the traffic trailer detected that $47.87 \%$ of vehicles slowed down in southbound direction and $57.61 \%$ slowed down in northbound direction when approaching the trailer. These percentages could include the vehicles slowed down to make a turn; however, it also shows that the trailer is influencing traffic calming.

### 3.0 Traffic Volume

Table 3 Volume Summary

| Direction | Period | Average Daily Traffic Volume |
| :---: | :---: | :---: |
| Southbound | June $30^{\text {th }}$ - July $7^{\text {th }}, 2021$ | $4,361.8$ |
| Northbound | July $7^{\text {th }}-14^{\text {th }}, 2021$ | $6,104.1$ |

Figures 8 and 9 show the average daily volumes on King St for northbound and southbound directions.

Figure 8 Total Volume per day (Northbound)

Figure 9 Total Volume per day (Southbound)

### 3.1 Southbound Volume by Hour

The data collected from July $1^{\text {st }}$ to $2^{\text {nd }}$ July $5^{\text {th }}$ to $6^{\text {th }}$ (weekdays) and July $3^{\text {rd }}$ to $4^{\text {th }}$ (weekend) are used to analyze the average traffic volume at different times of the day as shown in Figure 10 and Figure 11, respectively. It should be noted that July $1^{\text {st }}$ was a statutory holiday which may have had an effect on traffic flow.

Average Volume over Time

Figure 10 Average Volume by Hour from July 1st to 2nd and July 5th to 6th (Southbound)

Figure 11 Average Volume by Hour from July 3rd to 4th (Southbound)
As shown in Figure 10, peak traffic occurs in the middle of the afternoon from 2:00pm to 2:59pm on the weekday in the southbound direction. On the weekend shown in Figure 11, the peak was reached from 10:00am to 12:59pm.

### 3.2 Northbound Volume by Hour

The data collected from July $8^{\text {th }}$ to $9^{\text {th }}$ and July $12^{\text {th }}$ to $13^{\text {th }}$ (weekdays) and from July $10^{\text {th }}$ to $11^{\text {th }}$ (weekend) are used to analyze the average traffic volume at different times of the day as shown in Figure 12 and Figure 13, respectively.

Average Volume over Time

Figure 12 Average Volume by Hour from July 8th to 9th and July 12th to 13th (Northbound)

Figure 13 Average Volume by Hour from July 10th to 11th (Northbound)
As shown in Figure 12, peak traffic occurs in the middle of the day from 12:00pm to 1:59pm on the weekday in the southbound direction. On the weekend shown in Figure 13, the peak was reached from 12:00pm to 12:59pm.

### 4.0 Conclusion

The traffic study conducted on King St for both southbound and northbound directions was successfully carried out from June $30^{\text {th }}$ to July $13^{\text {th }}, 2021$. From the speed analysis, it was determined that $89.7 \%$ of vehicles travelling in the southbound direction were travelling within the accepted speed limit. It was also determined that $89.5 \%$ of vehicles travelling in the northbound direction were travelling within the
accepted speed limit. In addition, from the volume analysis, it was determined that the peak traffic hours were at the in the early afternoon on weekdays and during the late morning and early afternoon on weekends for southbound direction. It was also determined that the peak traffic hours were around the middle of the day in the northbound direction.
