

Notice of Construction

Town of Midland

Septage and Receiving Station

The Town is undertaking key upgrades to the municipal wastewater system at **200 Bay Street in Midland**. The Wastewater Treatment Centre (WWTC) **Septage and Receiving Upgrade Project** is one of three [water/wastewater infrastructure servicing projects](#) that is being funded through the Province's Housing-Enabling Water System Fund. The project encompasses upgrades to the Town's septage and receiving systems located at the WWTC to treat septic sewage for the town and neighbouring communities. This project includes.

- a new prefabricated Septage Receiving Station (SRS) complete with septage unloading connection.
- flow metering, screening and screenings handling equipment.
- associated mechanical, electrical, instrumentation, and control systems.

This project is needed as the current facility is not equipped to deal with the current septage sewage needs of the area. Upon completion of the [Wastewater Treatment Centre Headworks Upgrade Project](#) and the septage receiving upgrades, the WWTC will have capacity to process the sewage from Midland and neighbouring townships.

The project is scheduled to start September 1st, 2026 and is to be completed by June 30th, 2027. During construction, residents may notice periodic activity on or around the site. Every effort will be made to minimize disruption; however, increases in noise, construction traffic, and brief localized traffic slow-downs may occur.

COMMENTS

If you have any questions about this project, or if you would like additional information, please contact the project team members listed below. We appreciate your patience and cooperation as this work is completed.
